3.	HAZARDS IDENTIFICATION Most Important Hazards and Effects of the Products For Human Health: This toner is not classified as a human carcinogen. No symptoms expected with intended use. For the Environment: No data are available on the adverse effects of this product on the environment. For Others: None Specific Hazards: Dust explosion (like most finely divided organic
4.	powders) FIRST-AID MEASURES Symptoms of Overexposure: No symptoms expected with intended use.
4.	FIRST-AID MEASURES

Special Firefighting Procedures: None

Fire and Explosion Hazards: If dispersed in air, like most finely divided organic powders, may form an explosive mixture.

Protection of Firefighters: Use self-contained breathing apparatus (SCBA).

Local Effects: see Chronic Toxicity or Long term Toxicity

Chronic Toxicity or Long Term Toxicity:

Prolonged inhalation of excessive dust may cause lung damage. It is attributed to "lung overloading", a generic response to excessive amounts of any dust retained in the lungs for a prolonged interval. Use of this product, as intended, does not result in inhalation of excessive dust.

In a study in rats by chronic inhalation exposure to a typical toner, a mild to moderate degree of lung fibrosis was observed in 92% of rats in the high concentration($16mg/m^3$) exposure group, and a minimal to mild degree of fibrosis was noted in 22% of the animals in the middle($4mg/m^3$) exposure group. But no pulmonary change was reported in the lowest(lmg/m^3) exposure group, the most relevant level to potential human exposures.

Carcinogenicity

IARC Monographs:	Not	listed	
NTP(USA):	Not	listed	
OSHA Regulated(USA):	Not	listed	

In 1996 the IARC reevaluated carbon black as a Group 2B carcinogen (possible human carcinogen). This evaluation is given to Carbon Black for which there is inadequate human evidence, but sufficient animal evidence. The latter is based upon the development of lung tumors in rats receiving chronic inhalation exposures to free carbon black at levels that induce particle overload of the lung.

Studies performed in animal models other than rats have not demonstrated an association between carbon black and lung tumors. Moreover, a two-year cancer bioassay using a typical toner preparation containing carbon black demonstrated no association between toner exposure and tumor development in rats.

12. ECOLOGICAL INFORMATION
